EPA Endangerment Comments

Dear Endangerment Comments,

Results and effects due to global warming are present and clear: More

children and adults with asthma, severe allergies, sickness, swine flu, increase in mosquitos, higher risk of disease through increase of mosquitos, mosquitos carrying other viruses (swine flu), water levels, flooding, bacteria in water flooding from sewages, more rain= more floods= more breeding grounds for mosquitos= more mosquitos= more disease (Long Island, NY highest #of AIDS cases), ph acidity levels changing in oceans affecting fish which affects the food chain for all of us humans and animals, endangered species to become extinct, more animals to become endangered, ice caps melting (Antartica, Artica, Greenland, etc)= rise in ocean levels=flooding, Fire Island and Long Island beaches eroding at rapid rate, increase in damaging storms and hurricanes, tornados than ever before, more disasterous driving conditions=more accidents=more injuries and deaths= more missed work=less money=more stress=more depression=more

suicides/homicides=more death=more depression=war. Do we really need to spell it out for you in order for you to realize that significant positive changes must be made to ELIMINATE GLOBAL WARMING NOW!?? As a wildlife enthusiast who is concerned about the future of my community and the natural world, I strongly support your declaration that global warming pollution is a serious threat to public health and welfare.

Global warming threatens 1/3 of wildlife species with extinction and puts many communities in the U.S. at risk for disastrous flood and weather patterns.

I'm worried about the chilling consequences if we do not act now to cap the carbon emissions that cause global warming. That's why I urge you to move forward with this declaration and the regulations necessary to move us toward a clean energy future.

Please do not wait to acknowledge the truth. Global warming endangers our collective well-being and we must act now to stop it.

Sincerely,

Miss Nicole Schrank
